BATCH : 8

JUSTIFICATION FOR SUSTAINABLE DEVELOPMENT GOAL

TITLE	PRIMARY	SECONDARY	TERTIARY
GOAL	4. Quality Education	8. Decent work and economic growth	9. Industry, innovation and infrastructure
TARGET	SAP0403 : Equal access to affordable Technical, Vocational and Higher education SAP0406 : Universal literacy and numeracy SAP0404 : Increase the number of people with relevant skills for financial success	SAP0806 : Promote youth employment, education and training SAP0805 : Full employment and decent work with equal pay	SAP090C : Universal access to information and communications technology

Who we are?

Name of your Venture: **LINGUASKILL**

Why?

Explain why do you want to pursue this Business Idea.

I want to pursue this business idea because it removes language barriers in skill education, enabling regional learners to access vocational content accurately. An AI-powered, scalable multilingual platform improves accessibility, learning outcomes, and employability, while supporting government initiatives and creating sustainable impact across diverse formats and communities nationwide inclusive growth.

What?

Provide a brief on what does your venture do.

Our venture builds an AI-powered multilingual localization platform for skill education. It converts vocational content across text, audio, and video into multiple Indian languages with domain-specific accuracy, cultural relevance, and accessibility features, enabling inclusive, scalable, and cost-effective learning for regional and diverse learners.

How?

Explain how your venture solves the problem and make its revenue.

Our venture solves the problem by automating multilingual localization of vocational content using AI. It converts text, audio, and video into accurate, domain-aware regional languages, preserving technical terminology and cultural context. This removes language barriers, improves accessibility, and ensures consistent, scalable skill education delivery.

Revenue Model: We generate revenue through subscription plans for institutions, API licensing for LMS and government platforms, enterprise customization, and pay-per-use translation/localization services for training providers.

Problem & Opportunity

CONTEXT When does the problem occur? The problem occurs when vocational and skill development content is delivered mainly in English or Hindi, while learners from regional language backgrounds access courses in text, audio, or video formats they cannot fully understand.	PROBLEM What is the root cause of the problem? The root cause is the absence of an AI-powered, domain-specific multilingual localization system, leading to inaccurate translations, loss of vocational terminology, poor contextual understanding, and limited accessibility for regional learners.	ALTERNATIVES What do customers do now to fix the problem? Currently, customers rely on manual translation, generic machine translation tools, or bilingual instructors, which are time-consuming, costly, inconsistent, and unable to handle multi-format vocational content effectively.
CUSTOMERS Who has the problem most often? The problem most frequently affects regional language learners, vocational trainees, government skill development bodies, training institutes, and LMS providers aiming to reach learners in remote and diverse linguistic regions.	EMOTIONAL IMPACT How does the customer feel? Learners feel frustrated, excluded, and demotivated due to language barriers limiting understanding and confidence. QUANTIFIABLE IMPACT What is the measurable impact (include units)? Lower completion rates, reduced learner engagement, higher translation costs, and limited regional outreach.	ALTERNATIVE SHORTCOMINGS What are the disadvantages of the alternatives? Existing alternatives lack domain awareness, fail to support audio and video localization, produce inconsistent translations, increase operational costs, and do not scale efficiently for large, multilingual vocational training ecosystems.

Problem Interviews and Surveys Results

- **How many customers did you interview?**

We have not conducted formal customer interviews yet.

- **What was the interview mode?**

Not applicable, as structured interviews or surveys were not conducted.

- **How many of them agree this is a problem and wants a solution?**

Validation is currently based on documented problem statements, research references, and government skill development needs outlined in the SIH problem description.

- **How many of them said they don't need a new solution?**

Not assessed yet; this will be addressed in the next phase through planned user interviews and pilot studies.

Describe your Solution:

We offer an AI-powered multilingual content localization platform for vocational and skill education. The solution automatically converts text, audio, and video learning materials into multiple Indian languages while preserving domain-specific terminology and contextual accuracy.

The details of our offering consist of:

1. Domain-aware multilingual translation for vocational courses.
2. Multi-format processing including text, documents, audio, and video
3. Accessibility features such as voice output and screen-reader support

List the Benefits of Your solutions

1. Improves accessibility and learning outcomes for regional language learners
2. Reduces time, cost, and inconsistency associated with manual translation
3. Enables scalable, inclusive skill education aligned with government initiatives

Competition Analysis

Benefits	Competitor 1	Competitor 2	Competitor 3	Competitor 4	Your Venture
Product	Text-based translation tool	Video learning platform	Language learning app	Online tutoring service	AI platform converting audio, video, VR
Price	Free / Limited features	Subscription-based	Paid with ads	High cost	Affordable / Freemium model
Branding channels	Web and mobile apps	Social media and ads	App stores	Referrals	Educational platforms and institutions
Packaging	Single-language output	Video-only content	Course-based packages	Session-based learning	Multi-format content (audio, video, VR, 3D)
Market reviews	Average accuracy	Good engagement	Easy to use	Effective but costly	High accessibility and better understanding
UVP	Fast translation	Visual learning	Language practice	Personal guidance	Multilingual, immersive, and automated learning solution
Add more as required	Limited language support and no immersive visuals	Limited language support and no immersive visuals	Limited language support and no immersive visuals	Limited language support and no immersive visuals	Global language support with immersive learning experience

Lean Canvas

PROBLEM • Learning content is mostly in English and text format. • Users struggle to understand PDFs, images and docs. • Lack of audio, video, and visual explanations. EXISTING ALTERNATIVES • Online translator. • YouTube videos. • Manual teaching and tutoring. • E-learning platforms with limited languages	SOLUTION • AI platforms that converts docs and images into audio and video. • Multilingual support for global languages KEY METRICS • Number of active users. • Content conversion requests. • Engagement time	UNIQUE VALUE PROPOSITION • Learn any content in your own language with audio, video, and visuals. • One platform for translation, explanation. • Upload any file formats like mp3, pdf, docx, mp4 etc. HIGH-LEVEL CONCEPT “Google Translate + YouTube + VR learning for Education”.	UNFAIR ADVANTAGE • Domain specific and context aware learning. • Hard to replicate integrated solution. CHANNELS • Web application. • Educational institutions. • Online learning platforms.	CUSTOMER SEGMENTS • Students and learners. • Teachers and educators. • Skill development trainees. • Non-English and regional language users. EARLY ADOPTERS • College students. • Online learners. • Rural and regional language learners. • Skill learning institutes
COST STRUCTURE • Cloud infrastructure costs. • AI model training and APIs. • Development and maintenance. • Hosting and deployment.	REVENUE STREAMS • Subscription plans. • Freemium with premium features. • Institutional licensing. • API access for platforms			

Product description: Our MVP is a Figma-based interactive frontend prototype of an AI-powered multilingual skill content localization platform. It demonstrates the complete user flow for uploading vocational content, selecting target languages, and viewing localized outputs.

Prototype: The current MVP consists of high-fidelity Figma screens representing the landing page, language selection, content upload, translation dashboard, and output preview.

Video Link of Working Prototype: Not available at this stage, as the MVP is a design prototype.

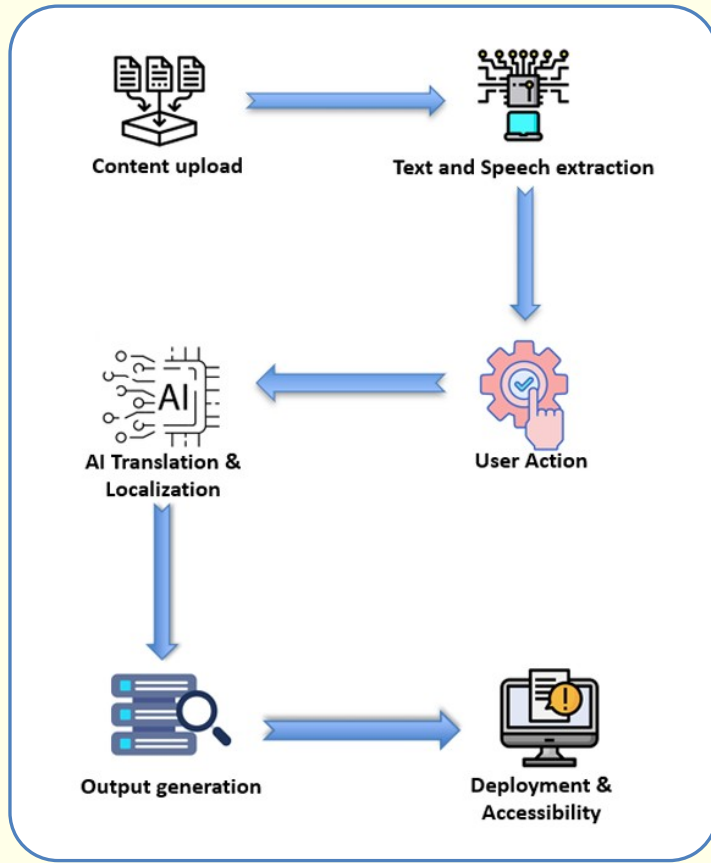

Website / App Link: Not deployed yet. The prototype is currently available as a Figma design for validation and feedback.

How the Product Works (User Steps):

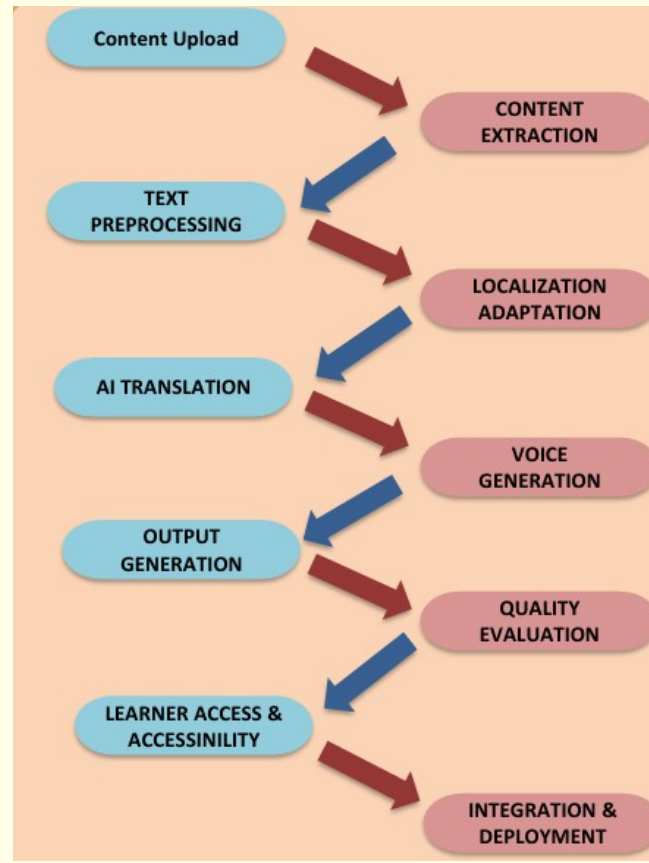

1. User uploads text, audio, or video learning content
2. Selects required regional language(s)
3. System processes and localizes content
4. User previews translated text and audio outputs

What makes us a good team to solve the problem we chose?

As Team Lead, I handle planning, coordination, and decision-making, ensuring clarity, timelines, and alignment with the problem statement.

The developer focuses on frontend and backend implementation, translating ideas into functional, scalable system designs and prototypes.

The R&D member analyzes the problem statement, studies existing solutions, AI models, and research papers to ensure our solution is relevant, feasible, and innovative.

Thank You!
